

Testing and Conformance Clarification-Request No.: 20071105-17

(Request-Nr, assigned by moderator: yyyyymmxx where xx=sequence# within the month)

Request from: Frank.Schubert@mbs-software.de

Stage:

- Request
- Listed by moderator
- Analysis by (TGTC or individual):.....
- Resolved

Reference: [referenced document(s) with number and revision]
7.3.2.23.10

Background:

This test does not consider the Buffer-purged event, when writing the value zero to record_count to purge the buffer.

In step 4 the total_record_count is stored and in step 10 the difference compared to notification_threshold. At least one event more as specified must be available in the buffer at this time.

Question / proposed solution:

Change test to consider the Buffer-purged event.

Response:

[By BIG-EU TGTC or by BTL-WG]

The BTL agrees and the test will be updated.
